The game then creates a random multiplier. If the produced multiplier is equal to or higher than the gamer's target, the bet wins. If it falls listed below the target, the bet loses.

How a Round Works:

1. **Place a Bet:** The player picks just how much money they desire to wager.
2. **Set a Target Multiplier:** The gamer picks their desired payment (e.g., 2x, 10x, 100x, or perhaps 1,000,000 x).
3. **Roll/Spin:** The gamer strikes the bet button.
4. **The Result:** The system produces a random number. The UI shows whether the target was fulfilled and calculates the payment immediately.
