In an online Plinko game, a gamer picks a bet quantity and drops a ball (or puck) from the top of a pyramid-shaped board. As the ball falls, it bounces arbitrarily off a series of pins before ultimately landing in one of a number of slot multipliers at the bottom. The multiplier in the slot where the ball lands identifies the payment.

The Evolution: From Television to Crypto Casinos

The Mathematics Behind the Board

Plinko's visual design is a direct representation of an analytical principle called the **Galton Board** (or binomial distribution device).

When a ball hits a peg, it theoretically has a 50% possibility of bouncing left and a 50% chance of bouncing right. Since of this normal circulation:

- The ball is statistically most likely to land in the middle slots, which is why those slots usually use the least expensive payouts (frequently less than the original bet).
- The ball is statistically least likely to strike the severe outer edges, which is why those slots boast the game's greatest multipliers.
