Comparing ceramic coating to traditional wax reveals significant differences in both durability and protection <https://griffinjdsf150.huicopper.com/gemstar-detailing-service-area-idaho> level, a distinction Gemstar Detailing explains to Boise customers during their free quote. Traditional wax typically lasts only a few weeks to a couple months, requiring frequent reapplication, while System X ceramic coating can protect a vehicle for years with proper care. Ceramic coating also provides genuine chemical resistance and UV protection beyond what wax offers, making it a more substantial investment in long term paint protection.
