What is the Limbo Casino Game?

Limbo is an instant-win gambling establishment game popularized mainly by crypto-focused online casinos. Inspired by the "Crash" mechanic, Limbo gets rid of the ascending rocket or line graph, changing it with a single, *limbo crypto game real money* immediate result.

When a player opens a Limbo game, they exist with 2 primary inputs:

1. **The Bet Amount:** How much cash they wish to wager on the round.
2. **The Target Multiplier:** The particular multiplier they hope the game will strike or exceed (e.g., 2x, 10x, 100x, and even 1,000,000 x).

When the player clicks the "Bet" or "Roll" button, the game instantly generates a random number. If the produced number is **higher than or equal to** the target multiplier, the player wins. If it falls below, the bet is lost.

How the Game Mechanics Work

At its core, Limbo is a game of likelihood. Unlike slots, where symbols determine wins, Limbo relies entirely on mathematics and possibility portions.

When a player sets a target multiplier, the game immediately determines two important metrics:

- **Win Chance:** The mathematical likelihood of hitting that particular multiplier.
- **Payment:** The total return if the target is reached (Bet £ \ times £ Target Multiplier).

Example of Limbo Mechanics

To comprehend how target multipliers impact gameplay, consider the following standard setup (which normally consists of a 1% house edge):

Target Multiplier	Win Chance (%)	Potential Payout on £ 10 Bet
1.10 x	90.90%	£ 11.00
2.00 x	50.00%	£ 20.00
5.00 x	20.00%	£ 50.00
10.00 x	10.00%	£ 100.00
50.00 x	2.00%	£ 500.00
100.00 x	1.00%	£ 1,000.00
1,000.00 x	0.10%	£ 10,000.00

As displayed in the table, as the prospective payment boosts, the win opportunity reduces proportionally.
