Due to the fact that Valve, the designer of Counter-Strike, introduced weapon skins as purely cosmetic products with varying degrees of rarity, they quickly obtained real-world monetary value.

Third-party entrepreneurs profited from this by creating sites that interface with Steam accounts. Users transfer their skins into a bot inventory, receive website credit or virtual coins, and use those credits to play numerous casino-style or custom-made games.

4. **Live roulette:** Similar to standard casino roulette, but normally adapted with 3 colors (e.g., Red, Black, and Green), where Green uses a much higher payout due to lower chances.
