The Anatomy of a Plinko Board

- **The Drop Zone:** The top of the board where players release the disc.
- **The Peg Field:** A staggered grid of metal or plastic pins. Each time a disc hits a pin, it has an approximately 50% chance of bouncing either left or right.
- **The Multiplier Slots:** The collection bins at the really bottom, each designated a particular multiplier value.

The Mathematics Behind the Bounce

Due to the fact that of the way the pegs are arranged in alternating rows, the path of the chip mimics a binomial circulation (frequently pictured as a Galton board). This means chips are statistically much more most likely to land in the center slots than in the severe outer slots. To balance this out, online versions appoint lower multipliers to the center and tremendously greater multipliers to the edges.

Common Misconceptions

- **"The chip remembers its path":** Each drop is an independent event. Simply because the chip arrived at the far left on the last drop does not indicate it is "due" to strike the ideal side.
