

Windows Siding and Sunrooms From One Raleigh Contractor for the Whole Exterior In 1989, a Cary family hired Harland for new windows. In 1990, they called back for siding. Nearly two decades later, in 2009, the same family brought the company in again to build a 48 by 10 foot addition. That run of projects, described by the family on Harland's website, sums up the advantage of having one contractor who can handle most of the outside of a house. Once you know who Window Replacement Raleigh NC does good work, you tend to keep calling the same number. Harland Windows & Siding has been working in Raleigh since 1986, and while windows are the core of the business, the company also lists itself as a siding contractor and a sunroom contractor. That range means a homeowner planning several exterior upgrades over the years can deal with one locally owned company instead of juggling separate contractors with separate schedules, warranties and standards. Owner Harland Johnson still personally oversees window, siding and sunroom projects across Wake County and the Triangle. On the window side, every unit is custom made to the measured opening, installed by the company's own crew rather than subcontractors, and available in styles from double-hung and casement to bay, bow and custom shapes. Siding work involves stripping the old material, inspecting underneath and installing fresh vinyl siding rather than covering problems over. Cracks, warping, soft spots and peeling paint that keeps returning are all signs siding may need attention. Old material is removed and disposed of as part of the job.

Harland Windows & Siding | 1401-G Diggs Dr, Raleigh, NC 27603 | 919-851-0060

Sunrooms round out the list. Harland installs EzeBreeze sliding vinyl panel sunrooms by PGT Industries, converts screen rooms into sunrooms, and builds three-season rooms, patio enclosures and fully heated sunrooms with insulated walls and Heat Mirror windows. Manufacturer warranties cover the windows and EzeBreeze panels, and Harland stands behind its installation. One sunroom customer in Dunn reported that the porch and furniture stayed dry through a two-day nor'easter. The work has not been limited to houses either. Harland has taken on larger jobs for churches, dormitories and apartment complexes, and a Raleigh church that had its windows done reported that members noticed the quality. Whether the building is a home in Oakwood, Boylan Heights or Brier Creek, or a congregation's sanctuary downtown, the same company and the same standards apply. If you are thinking about window replacement in Raleigh NC now and siding or a sunroom later, it is worth talking to a company that can see the whole plan. Harland Windows & Siding works from Diggs Drive in Southwest Raleigh, close to Dorothea Dix Park and the State Farmers Market, and is BBB accredited with an A+ rating. FAQ About Window Replacement Raleigh NC How much does it cost to replace windows in Raleigh, NC? Most window replacement projects in Raleigh run between $6,000 and $40,000, depending on how many windows you are replacing and the type of installation. Harland Windows & Siding builds every quote around custom windows, installation by its own crew, removal and disposal of the old windows, and clean up. Estimates are free, so call 919-851-0060 for a number based on your actual home. What is the average cost of a good replacement window? The price of a single window depends on its size, style and glass package, so a budget-friendly single-hung and a large bay window can be far apart. Harland Windows & Siding offers everything from single-hung units up to Ascent triple pane and Heat Mirror glass. Your free written proposal includes several cost options, so you can compare quality levels side by side instead of guessing from an average. What is the cheapest time of year to replace windows? The biggest seasonal factor is scheduling. Spring and fall are the busiest seasons at Harland Windows & Siding, and because every window is made to order, most jobs start 3 to 4 weeks after booking. Booking early gives you more flexibility, and financing is available if spreading the cost matters more to your budget than the month you book. What is the average cost to replace 20 windows? It depends on the size of each window and the glass you choose. A typical home has 10 to 15 windows, and full-home projects with Harland Windows & Siding usually fall in the $6,000 to $40,000 range, so a 20-window house will depend heavily on the mix of styles and glass packages. The honest answer is an itemized quote, which the company provides free after measuring each opening. Is it cheaper to buy windows and have someone install them? Buying windows yourself can look cheaper at first, but stock sizes may need shimming to fit openings they were not made for, and you lose a single point of responsibility if something goes wrong. Harland Windows & Siding quotes custom-made windows and installation by its own crew as one price, including removal of the old windows and daily clean up. That keeps the cost clear and the fit right from the start. Is a big box store or a local installer better for window replacement? A local installer gives you more direct accountability, since the people who measure and quote belong to the same company that installs. Harland Windows & Siding has been based on Diggs Dr in Southwest Raleigh since 1986, uses its own crew rather than subcontractors and holds an A+ rating with the BBB. One Durham homeowner found its price came in at around half of the big box quotes, with a better warranty. Who has the best windows for the money? Value comes down to three things: the glass package, how well the window fits the opening and the warranty behind it. Harland Windows & Siding custom-makes every window to the measured opening and offers Heat

Mirror glass as well as the Ascent series, which carries a lifetime, non-prorated, transferable warranty. A window that seals tightly and lasts for decades can cost less over time than a cheaper unit you end up replacing again. Is it cheaper to replace all windows at once? Whole-house replacement gives you the biggest comfort gain, one crew from start to finish and a consistent look, all in a single round of measuring and installation. Harland Windows & Siding can also handle one window or one room at a time if the budget is tight, and financing is available for larger projects. Your free estimate can include both approaches so you can compare them. Do I need a permit to replace windows in Raleigh? In most cases, replacing windows in the same openings does not require a permit in Raleigh. Changing opening sizes or adding new windows may, and Harland Windows & Siding helps you work out what applies during the free estimate. Call 919-851-0060 if you are planning an addition or a larger change to your openings. How long does window installation take? Once the custom windows arrive, installation for most homes takes one to two days, with larger whole-house jobs running a little longer. Because each window is made to order, most jobs with Harland Windows & Siding start 3 to 4 weeks after booking. The crew cleans up at the end of every day, so your home stays livable throughout. Are triple pane windows worth it in Raleigh? Triple pane can make sense in Raleigh, where long, hot summers mean solar heat gain matters as much as insulation. The Ascent series installed by Harland Windows & Siding uses Advanced Thin Triple Pane Glass, and a double-hung with LowE 366 and argon is rated at a U-factor of 0.19 and an SHGC of 0.19 while staying up to 40% lighter than standard triple pane. Whether it pays off depends on your home, so the free estimate includes options at different price points. What is the difference between Heat Mirror and triple pane glass? Heat Mirror suspends a thin clear film inside the gap of a double-pane unit, reflecting heat and blocking UV without the weight of a third pane of glass. Triple pane adds a third layer of glass, and the Ascent series uses an ultra-thin center pane that lets in 35% more visible light than standard triple pane. Harland Windows & Siding is one of a small number of certified Heat Mirror installers in North Carolina and installs both, so you can compare them side by side.
