

Heavy rain is one of the most common triggers for basement water intrusion and foundation stress throughout the Des Moines Metro area, a challenge JLB Basement Waterproofing & Foundation Repair LLC addresses directly. Iowa's soil does not always absorb water quickly, meaning heavy rainfall can saturate the ground around a foundation, increasing hydrostatic pressure against [foundation repair](#) basement walls. JLB's combination of foundation repair, basement waterproofing and proper drainage solutions like French drains helps homes withstand heavy rain events without water intrusion or structural stress.
