The objective is simple: **squander before the game arbitrarily "crashes."**

If a player effectively cashes out at 2.50 x, they double their wager (minus a small home edge). However, if the game crashes before they cash out, they lose their whole bet for that round. The twist is that crashes can take place at any millisecond-- sometimes instantly at 1.00 x, and other times soaring previous 100x or even 1,000 x.

A Typical Round: Step-by-Step

1. **The Betting Window:** Players have a short window (generally 5 to 10 seconds) to put one or 2 bets for the upcoming round.
2. **The Lift-Off:** The round begins. A rocket, line, or graphical multiplier begins to ascend from 1.00 x upward.
3. **The Decision:** Players enjoy the multiplier climb in real time, making a split-second decision to click "Cash Out" to secure their current profit.
4. **The Crash:** Suddenly, the video game stops. A "Crashed at X.XX" message appears. Anyone who had not cashed out loses.
