Comprehending the Mechanics of Case Battles

A case battle is a head-to-head or multi-player contest where each participant opens the same set of CS: GO cases. The gamer who gets the most valuable product (or the highest total value) wins the pot. Since the result is driven by the random number generator (RNG) that governs every case opening, the underlying mathematics correspond opening cases in a solo context. The only difference is the competitive aspect: you're not simply battling the system, you're fighting other gamers who may have different methods.

The core metric to bear in mind is **Expected Value (EV)** EV is computed as:

$$EV = \sum (\text{Possibility of each product} \times \text{Item's market Case Battles value})$$

If the EV of a case is lower than its cost, the case is, usually, a losing proposal. Knowing which cases tend to provide a higher EV helps a gamer pick the most successful battles.
